MOSAICO HIDRÁULICO . MANUAL

O mosaico hidráulico é um material centenário de produção manual.

Usando como base os desenhos tradicionais ou novas criações, moldam-se as formas de ferro que serão a matriz do padrão do mosaico.

A camada superficial é constituída por cimento e areia que, misturados com água e pigmentos de cor, formarão a pasta para encher as formas.

A pasta fluída é deitada sobre a matriz ou forma, colocada previamente dentro do molde e após alguns segundos, com cuidado para não misturar os diferentes tons da pasta, é retirada a forma.

A pasta, que entretanto ganhou alguma presa, salpica-se com pó de mármore e enche-se o molde com argamassa de cimento que será o tardo do mosaico. Sobre a argamassa, coloca-se um cunho de ferro sobre o qual será exercida pressão na prensa hidráulica.

O mosaico é então cuidadosamente desenformado, para que a pasta, ainda fresca, não adira à base ou às paredes do molde. Depois é colocado num caixilho e será mergulhado em água durante 24 horas.

Finalmente, os mosaicos hidráulicos serão colocados a secar ao ar durante, aproximadamente, 15 dias.

Nesta altura estará pronto para aplicação!

Este é um material único pela sua resistência e durabilidade mas sobretudo pela sua beleza, pela variedade dos seus padrões e a possibilidade, quase infinita, de combinações de cores.

Cada mosaico é feito sob encomenda, para que cada cliente possa escolher um padrão e a combinação de cores desejada, criando um produto único e personalizado.
