THE HOSPITAL AREA

EN

INTRODUCTION

The Health and Medicine areas and its correspondent systems are changing: new procedures and IT are constantly redefined and integrated.

The future of these spaces should consider aspects such as the relation between new functionalities, facilities, accesses, control, comfort, flows and the efficient and pleasant relation between the professional and the patient. In fact, the evolution and development are inevitable and the environments in the health area should be imposingly flexible, in order to make the integration of new systems, technologies and protocols possible.

Industrial Laborum Ibérica, based on its wide experience on product development for the health area and on the research of ergonomic factors, tries to present more efficient and flexible solutions for hospital spaces. Besides, it recognizes that variety and aesthetics are essential potentialities for the selection moment, once that are qualities which have a major impact on the space's perception by professionals and patients.

Additionally, the current security standards and regulations on the development of hospitals and other health care units demand the combination of several elements, such as:

- planning the installation,
- accurate maintenance,
- enough quantities of individual and collective security equipments.

Therefore, ILI works very closely with the customer, architect and/or constructor on the redefinition of the health spaces' future, promoting the necessary tools for its re-thinking and for the practice and daily improvement. Our experience allows us to conclude that small details set the difference in what concerns the health professionals' work quality.

PT

INTRODUÇÃO

As áreas da Saúde, Medicina e os seus respectivos sistemas estão em mudança: são constantemente redefinidos e integrados novos procedimentos e tecnologias de informação.

O futuro destes espaços deverá considerar variáveis como a relação entre novas funcionalidades, facilidades, acessos, controlos, conforto, fluxos e a relação eficiente e agradável entre profissional e paciente. De facto, o desenvolvimento e a evolução são inevitáveis, e os ambientes na área da saúde devem ser imponentemente flexíveis para possível integração de novos sistemas, tecnologias e protocolos.

A Industrial Laborum Ibérica, com base na sua vasta experiência no desenvolvimento de produto na área de saúde e na pesquisa de factores ergonómicos, procura apresentar soluções para os espaços hospitalares, sobretudo mais eficientes e flexíveis. Reconhece, ainda, que potencialidades como a variedade e a estética são essenciais no momento de selecção já que têm grande impacto na percepção do espaço pelos profissionais e pacientes.

Adicionalmente, as actuais normas e regulamentos de segurança no desenvolvimento de hospitais e de outras unidades de saúde exigem a articulação de vários elementos:

- planeamento de instalações,
- manutenção rigorosa,
- quantidades necessárias de equipamentos de segurança individuais e colectivos.

A ILI trabalha, assim, numa relação estreita com o cliente, arquitecto e/ou construtor na redefinição do futuro dos espaços de saúde, promovendo as ferramentas necessárias para repensar e melhorar a prática e o dia-a-dia do seu utilizador. A nossa experiência permite concluir que pequenos detalhes marcam a diferença na qualidade do trabalho dos profissionais de saúde.

FR

INTRODUCTION

Les domaines de la santé, médecine et leurs respectifs systèmes évoluent: ils sont constamment redéfinis et de nouvelles procédures et technologies d'information sont intégrées. Le futur de ces espaces devra tenir en compte toutes les variables comme la relation entre les nouvelles fonctionnalités, facilités, accès, contrôle, confort, fluxes et la relation entre efficacité et agréable entre les professionnels et les patients. En fait, le développement et l'évolution sont inévitables, et les environnements dans les soins de santé doivent être singulièrement flexibles pour la possible intégration de nouveaux systèmes, technologies et protocoles.

Industrial Laborum Ibérica, basée sur sa vaste expérience dans le développement de produits dans le domaine de la santé et de l'étude de facteurs ergonomiques, cherche à apporter des solutions pour les espaces hospitaliers, surtout, plus efficaces et flexibles. Nous reconnaissons également que le potentiel de la variété et de l'esthétique sont essentiels au moment de la sélection car ils ont un grand impact sur la perception de l'espace par les professionnels et les patients.

En outre, les actuelles normes en vigueur et les règlements de sécurité en ce qui concerne le développement des hôpitaux et des autres établissements de soins de santé exigent l'articulation de plusieurs éléments:

- planification des installations,
- entretien rigoureux,
- quantités de matériel de sécurité individuel et collectif nécessaire.

ILI travaille de cette façon, avec une relation proche entre le client, architecte et/ou constructeur, dans la redéfinition de l'avenir des zones de santé, en fournissant les outils nécessaires pour repenser et améliorer la pratique et le quotidien. Notre expérience démontre que les petits détails marquent la différence dans la qualité du travail des professionnels de la santé.

MODEL-SPACES AND SOLUTIONS

EN

SPACES

The configuration's logic of ILI's hospital furniture's modular system is to create and provide a comfortable, functional and appropriate environment for the users in the health spaces. Without compromising the specific functions of each model-space, the relation between the modules allows the changing and reconfiguration of the work spaces, in a way that:

- it adapts itself to the architectural project;
- it privileges the humanization, comfort, access and users' security;
- it respects the circulation and work flows;
- it allows the adaptability and flexibility.

SOLUTIONS

ILI's hospital furniture's modular system was developed specifically for these spaces, accomplishing the current legislation and taking into consideration the intensive daily use.

They are essentially characterized by its versatility and flexibility, mobility, order and internal sort-out facility, chemical and physical resistance, durability, easy maintenance and security.

Underlining the modular versatility of the system, ILI presents the different standard configurations' possibilities of the modules, within the same range:

a) Base

- With wheels, suspended, sliding, on closed or tubular plinth;

b) Fronts

- Sink cabinets with 1 or 2 doors;
- Cabinets without doors and with 2 shelves;
- Cabinets with 1 door and 2 shelves;
- Cabinets with 1 door and 1 drawer;
- Cabinets with 2 doors and 2 drawers;
- Cabinets with 5 drawers.

Each module represents the design's care and accuracy, by the wise selection of the materials and the building processes and details used in favor of quality, security and hygiene. All products are submitted to rigorous tests, which certificate their quality.

PT

ESPAÇOS

Criar e proporcionar um ambiente confortável, funcional e adequado às necessidades dos utentes em espaços de saúde é o que move a lógica de configuração do sistema modular das linhas de mobiliário hospitalar da ILI. Sem comprometer as funções características de cada espaço-tipo, a relação entre os módulos permite mudar e reconfigurar os espaços de trabalho, de modo a que este:

- se adapte ao projecto arquitectónico;
- privilegie a humanização, o conforto, o acesso e a segurança dos utilizadores;
- respeite a circulação e os fluxos de trabalho;
- permita a adaptabilidade e flexibilidade.

SOLUÇÕES

O sistema modular de mobiliário hospitalar da ILI foi especificamente desenvolvido para estes espaços, cumprindo a legislação em vigor e tendo em conta uma utilização diária intensiva. São, assim, essencialmente caracterizados pela versatilidade e flexibilidade, áreas livres de espaço de trabalho, mobilidade, facilidade de ordem e arrumação interna, resistência química e física, durabilidade, fácil manutenção e segurança.

Sublinhando a versatilidade modular do sistema, são apresentadas diferentes possibilidades de configurações standard dos módulos, dentro da mesma linha:

a) Ao nível dos apoios

- rodado, suspenso, deslizante, rodapé fechado, rodapé tubular;

b) Ao nível das frentes

- Móveis de pia com 1 ou 2 portas;
- Móveis sem portas com 2 prateleiras;
- Móveis com 1 porta e 2 prateleiras;
- Móveis com 1 porta e 1 gaveta;
- Móveis com 2 portas e 2 gavetas;
- Móveis com 5 gavetas.

Cada módulo representa o cuidado e rigor de concepção, pela selecção criteriosa dos materiais e dos processos e pormenores construtivos utilizados, em prol da qualidade, segurança e higiene. Todos os produtos são ainda submetidos a testes rigorosos que certificam a qualidade dos mesmos.

FR

ESPACES

Créer et offrir des espaces confortables, fonctionnels et adaptés aux besoins des utilisateurs, dans le domaine de la santé, est ce qui motive la configuration logique du système modulaire des lignes de mobilier hospitalier de l'ILI. Sans compromettre les fonctions caractéristiques des espaces types, la relation entre les modules permet changer et reconfigurer les espaces de travail, de manière à:

- s'adapter à la conception architecturale;
- supporter l'humanisation, le confort, l'accès et la sécurité des utilisateurs;
- respecter les mouvements et les flux de travail;
- Permettre l'adaptabilité et la flexibilité.

SOLUTIONS

Le mobilier hospitalier modulaire de l'ILI à été spécialement conçu pour ces espaces, en stricte conformité avec la législation en vigueur et tenant compte l'utilisation quotidienne et intensive. Ainsi, ils sont essentiellement caractérisés par leur polyvalence et souplesse, de créer des espaces de travail ouvert, de leur mobilité, de leur facilité d'ordre et de stockage interne, résistance chimique et physique, durabilité, entretien facile et sécurité.

Soulignant la polyvalence du système modulaire nous présentons différentes options pour la configuration standard des modules, dans la même gamme:

a) Au niveau des appuis:

- Sur roulettes, suspendus, suspendus coulissants, socle fermé, socle tubulaire;

b) Au niveau des façades:

- Meubles pour éviers ou cuves, avec 1 ou 2 portes;
- Meubles sans portes avec 2 étagères;
- Meuble avec 1 porte et 2 étagères;
- Meuble avec 1 porte et 1 tiroir;
- Meuble avec 2 portes et 2 tiroirs;
- Meuble avec 5 tiroirs.

Chaque module symbolise l'attention et la rigueur de la conception, la sélection rigoureuse des matériaux, des procédures et des détails constructifs utilisés, avec qualité, sécurité et hygiène. Tous les produits sont soumis à des tests rigoureux pour certifier leur qualité.

MODULES HOSPITALIERS

HOSPITAL MODULE

EN

Within Industrial Laborum Iberica's hospital furniture range, the benches are composed by upper/ base modular units, allowing various configurations, according to the choices for the fronts, bases and supplements.

Each base module consists of one cabinet sitting on a base and it can support different worktop surfaces. The fronts may have the following settings:

- Base sink cabinet with 1 or 2 hinged door(s);
- Base cabinet with 1 or 2 hinged door(s) and 1 shelf;
- Base cabinet with 1 drawer, 1 hinged door and 1 shelf;
- Base cabinet with 2 drawers, 2 hinged doors and 1 shelf;
- Base cabinet with 5 drawers;
- Base filling cabinet with 2 shelves.

The upper module, on the other hand, comprises a upper cabinet fixed onto the wall, with the top tilted so as to allow visual inspection and to avoid the accumulation of dust or other objects. It may have the following settings:

- Upper cabinet with 1 hinged door and 1/2 shelf(ves);
- Upper cabinet with 2 hinged doors and 1/2 shelf(ves);
- Upper cabinet with 2 sliding glass doors and 1/2 shelf(ves);
- Upper filling cabinet with 1/2 shelf(ves);

Industrial Laborum Ibérica also embodies specific solutions which grant more complete and functional benches, namely:

- Stainless steel sinks (embedded or welded);
- Sinks and bathtubs for newborns made out of acrylic resins (Corian® type);
- Hospital mixing taps;
- Hospital cold water taps;
- Nursing tables (to be integrated on cabinets);
- Nursing foldable mattresses (to be placed onto the worktops);
- etc.

PT

Na linha de mobiliário hospitalar da Industrial Laborum Ibérica, as bancadas são compostas por unidades modulares superiores e/ou inferiores, admitindo várias configurações, conforme as frentes, os suportes e os complementos.

Cada módulo inferior é constituído por um móvel assente num suporte e admite que se instalem diferentes superfícies de trabalho (tampos). As frentes podem ter as seguintes configurações:

- Móvel inferior de pio com 1 ou 2 portas batentes;
- Móvel inferior de 1 ou 2 portas batentes com 1 prateleira;
- Móvel inferior de 1 porta batente 1 gaveta, com 1 prateleira;
- Móvel inferior de 2 portas batentes e 2 gavetas, com 1 prateleira;
- Móvel inferior de 5 gavetas;
- Móvel inferior aberto de remate com 2 prateleiras.

O módulo superior, por sua vez, compreende um móvel superior, de fixação mural, com o topo inclinado de forma a possibilitar a inspeção visual e a impossibilitar a acumulação de poeiras ou outros objectos.

Pode ter as seguintes configurações:

- Móvel superior de 1 porta batente com 1 ou 2 prateleira(s);
- Móvel superior de 2 portas batentes com 1 ou 2 prateleira(s);
- Móvel superior de 2 portas de correr de vidro com 1 ou 2 prateleira(s);
- Móvel superior aberto de remate com 1 ou 2 prateleira(s).

A Industrial Laborum Ibérica integra, ainda, soluções específicas possibilitando bancadas mais completas e funcionais, nomeadamente:

- Pios em aço inoxidável (1 encastrado ou 2 soldados);
- Lava-louças em aço inoxidável (encastrados ou soldados);
- Pios e Banheiras para recém-nascidos em resinas acrílicas (tipo Corian®);
- Torneiras misturadoras hospitalares;
- Torneiras de água fria hospitalares;
- Cama para vestir recém-nascidos (integrada num móvel);
- Colchão dobrável para vestir recém-nascidos (para colocação sobre o tampo);
- etc.

FR

Dans la gamme de mobilier hospitalier d'Industrial Laborum Ibérica, les paillasses sont composées par des unités modulaires supérieures et/ou inférieures, admettant plusieurs configurations, tenant en compte les façades, les supports et les compléments.

Chaque module inférieur est composé par un meuble posé sur un support et admettant l'installation de divers plans de travail.

Il peuvent présenter les configurations suivantes:

- Meuble inférieur pour cuve avec 1 ou 2 portes battantes;
- Meuble inférieur avec 1 ou 2 portes battantes et étagères;
- Meuble inférieur avec 1 porte battante, 1 tiroir et 1 étagère;
- Meuble inférieur avec 2 portes battantes, 2 tiroirs et 1 étagère;
- Meuble inférieur avec 5 tiroirs;
- Meuble inférieur sans portes pour colmatage avec 2 étagères.

Le module supérieur comporte un meuble supérieur fixé sur le mur, avec la partie supérieure inclinée de façon à permettre une inspection visuelle et d'éviter l'accumulation de poussières ou d'autres objets. Il peuvent présenter les configurations suivantes:

- Meuble supérieur avec 1 porte battante et 1 ou 2 étagère(s);
- Meuble supérieur avec 2 portes battantes et 1 ou 2 étagère(s);
- Meuble supérieur avec 2 portes coulissantes en verre avec 1 ou 2 étagère(s);
- Meuble supérieur sans portes, de colmatage, avec 1 ou 2 étagère(s).

Industrial Laborum Ibérica incorpore aussi des solutions spécifiques, pourvoyant que les paillasses soient plus complètes et fonctionnelles, notamment:

- Cuves en acier inoxydable (encastrées ou soudées);
- Éviers en acier inoxydable (encastrés ou soudés);
- Cuves et baignoires pour nouveau-nés en résines de synthèse acrylique (type Corian®);
- Robinets mitigeurs hospitaliers;
- Robinets d'eau froide hospitaliers;
- Tapis de change pour nouveau-nés (intégrés au meuble);
- Matelas pliable à langer pour nouveau-nés (pour application sur plan de travail).

In laboratory spaces the worktops are especially vulnerable surfaces. For this condition, the selection of their material requires that you must consider characteristics such as maximum hygiene, aseptic, high chemical resistance and durability, due to its intense daily use. Within these parameters, Industrial Laborum Ibérica offers several solutions.

Os tamos, em espaços hospitalares, são superfícies especialmente vulneráveis. Por esta condição, a seleção do seu material requer que se considerem obrigatoriamente características como a máxima higiene, assepsia e a grande resistência química e durabilidade, face a uma utilização diária e intensa. Dentro destes parâmetros, a Industrial Laborum Ibérica oferece variadas soluções.

Les plans de travail, dans les hôpitaux, sont des surfaces spécialement vulnérables. Du a ce fait, la sélection du matériel nécessite de tenir en compte des caractéristiques comme l'hygiène, l'asepsie, la résistance chimique et la durabilité, face à une utilisation quotidienne et intensive. Dans ces paramètres, Industrial Laborum Ibérica offre plusieurs solutions.
